SUMMARY

Software Engineer specializing in AI-powered applications, distributed systems, and cloud-native architectures. Experienced in designing and building scalable microservices, real-time communication platforms, and intelligent data processing systems. Proven experience delivering production-ready AI features .

EDUCATION

Braude College of Engineering

B.Sc. Software Engineering

University of Haifa

Android FullStack Development Program, MealPlan Application Project (320 Hours)

EXPERIENCE

Full Stack Software Engineer

2024 – 2026

Kaleidoo (AIQ)

- Architected and developed an AI-powered Metadata Microservice that automatically generates tags, descriptions, and person-identification metadata using Florence models, facial recognition, and a Milvus-backed RAG pipeline, significantly improving content discoverability and search relevance.
- Designed and implemented a Server-Sent Events (SSE) microservice enabling real-time token-streaming AI responses for interactive chat experiences.
- Designed and implemented a real-time multilingual call translation system using WebSockets, Socket.IO, RabbitMQ, and React, enabling live translation delivery during active conversations.
- Built cursor-based pagination and asset retrieval mechanisms integrated with hybrid storage solutions (MinIO and Google Cloud Storage) across multi-tenant environments.
Developed scalable microservices deployed on Kubernetes and integrated into CI/CD pipelines for reliable multi-environment delivery.
- Worked extensively with Temporal.io workflows to orchestrate distributed processes, monitor workflow execution, troubleshoot production issues, and improve service reliability.
- Collaborated within a 6-member Agile engineering team, participating in sprint planning, retrospectives, code reviews, architecture discussions, and feature delivery.

Data & AI Developer Intern

Jan 2024 – Jun 2024

Analiza

- Developed an e-commerce recommendation platform leveraging Kafka and Kubernetes to process and deliver personalized product recommendations.
- Containerized services using Docker and deployed applications through Kubernetes-based environments.

TECHNICAL SKILLS

Python, TypeScript, JavaScript, Java, React, Node.js, PostgreSQL, MongoDB

Milvus, Kafka, RabbitMQ, Temporal, Docker, Kubernetes, AWS, GCP,

Linux, Microservices, RAG, Vector Search, Redis

MILITARY SERVICE

IT Backup & Storage Specialist Israeli Air Force – Ofek 324

2020 – 2021
